

The engineers with witness expertise

THERE IS evidence that the way to defend the UK's global position in engineering consultancy is to provide a quality of service and speed of response that reflect our national education and character.

Manderstam International Group, established in 1941, provides independent bespoke engineering and economic development services worldwide. The company has provided process and industrial engineering in specialised technologies in over 90 countries, and has a significant track record in providing expert witness services approved by the UK Law Society.

The importance of small and nimble organisations being able to cater to

Company profile

customer-specific needs has never been more important in a marketplace dominated by 'global majors' that have neither the specialised technical expertise nor speed of reaction to satisfy many small and medium-sized enterprises.

There are many companies like Manderstam that prosper by virtue of reputation, quality of work, flexibility and speed of reaction. Manderstam's expertise lies in oil and gas, petrochemicals, salt-based industries, fertilisers, cement, vegetable oils, cotton, food processing, pulp and paper.

Established in 1941

Manderstam International Group

Consulting Engineers

Specialist areas of work:
